

Format Fix for Firmware 2.2 v1.0

a fix collection for nearly 50 countries

This application try to solve a troublesome problem found especially in countries where iPhone is not distributed :

Phone Number Formatting

Formatting is very useful when international prefix , area code and subscriber number are correctly separated with spaces or dashes but is tremendous if wrong informations or formats are used.

This application replace the format file with an upgraded version .

WARNING - (for countries outside list)

this application doesn't add your country to menu list :

Settings -> General -> International -> Region Format -> xxxxxx

and the formatting rules of the xxxxxx country are applied when you

don't use international prefix in your numbers. **See also Appendix C**

In this case is recommended to use international prefix for saved numbers .

See Appendix A for a list of supported countries and fixes.

The full path of Fix file for Firmware v2.2 is :

/System/Library/Frameworks/UIKit.framework/PhoneFormats/UIDefaultFormats.phoneformat

If application is Uninstalled the original file is restored from a backup copy

UIDefaultFormats.phoneformat.bup created during installation.
